## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. Claim 2 recites the limitation "the first part" in the last line of the claim. There is insufficient antecedent basis for this limitation in the claim.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Komori et al., U.S. Pat. Application Pub. 2004/0137320 A1.

Rejection of claims 1-13 drawn to a battery.

Komori et al., teach a nickel metal hydride storage battery comprising a case (sect. 0005), a group of electrode plates in the case (sect. 0005; Fig. 3), wherein the case comprises a main body having a hole and a lid for closing the hole (Fig. 1A); the case comprises a first portion made of a metal and a second portion made of a resin (sect. 0007-0008). It teaches one or more resin layers (sect. 0010) or a multilayered film

(sect. 0014). It teaches a thickness of 5-100  $\mu\text{m}$  (sect. 0012). It teaches the negative electrode comprises hydrogen absorbing alloy (sect. 0036). It teaches a polymer alloy of polypropylene and polyphenylene ether (sect. 0021). It teaches a case formed of metal sheet (sect. 0050-0051).

Komori et al., do not teach the relative percentages of areas of the portions of the battery case, the hydrogen permeability coefficient, the equilibrium hydrogen desorption pressure, the capacity of the battery, the area per cell of the battery.

However, the invention as a whole would have been obvious to one of ordinary skill in the art at the time the invention was made because discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Arai et al., U.S. Pat. No. 6,528,202 B1, and Von Benda et al., U.S. Pat. No. 4,892,793 teach a battery case for a metal-hydride battery. Tsuboi et al., JP 05283059A teach a sealed alkaline storage battery case. Murato, JP 05021045 A teaches a sealed battery case.
